ABOUT ME

I am Devesh Prakash, a dedicated full-stack web developer and BCA student with expertise in cloud computing, NoSQL databases, and workflow automation. My technical skills include configuring cloud infrastructures, managing databases like MongoDB, and implementing CRUD operations. I have hands-on experience with Linux, Windows OS, PowerShell scripting, and containerization technologies like Docker and Kubernetes.

I am passionate about developing scalable cloud solutions and optimizing IT infrastructures for security and performance. My entrepreneurial mindset drives me to build innovative digital products, such as an AI-powered image compression website and a custom Android-based OS.

Currently preparing for an MBA, I aim to merge technology with business strategy to develop cutting-edge automation solutions. I am eager to contribute my skills to Creatio's no-code platform and cloud services, ensuring seamless and efficient digital transformation for businesses worldwide.
